**4G**  
TECHNOLOGY

**MDVR is a digital video recorder**, specially developed for use in vehicles. It is endowed with software for controlling, operating and viewing the images of your fleet. This being its main application, fleet control is carried out through the real-time transmission of images, alarms and route.

With high performance processor, it records in 1080p, 720p (AHD) and WD1, D1, WHD1, HD1, WCIF and CIF (analog) resolutions. In addition, by connecting alarms, it stores and transmits event information from contacts linked to the equipment. It is robust, easy to install and ensures simplified maintenance and high reliability.
